## 5 reflex-zones

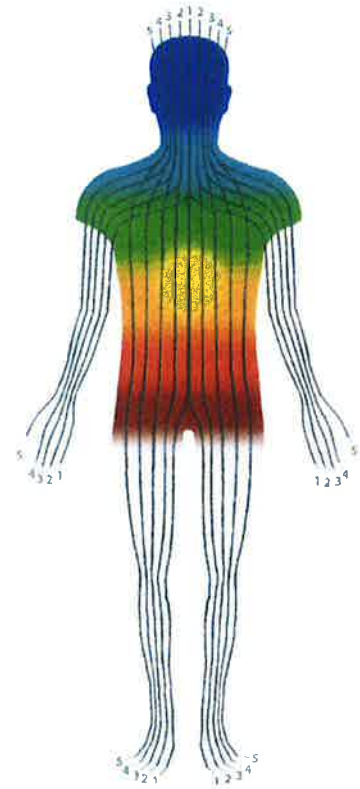

The reflex-zone concept assumes that there are existing connections between the zones of the feet and different body parts. Accordingly any stimulation shall have an effect on the connected organs. Due to stimulation of the reflex-zones, the selfhealing processes and regulatory systems in certain parts of the body can possibly be activated. The effect can then be relaxative, stimulatory, exhilarant or analgic and can support the reduction and excretion of waste and toxins. In this way a harmonisation of function sequence shall be reached, wick shall be conducive to the stabilisation of the body's defences and to the whole inner balance. A stimulation of the reflex-zones causes a harmonic change between exertion and relaxation, and thus, boosts general well-being.

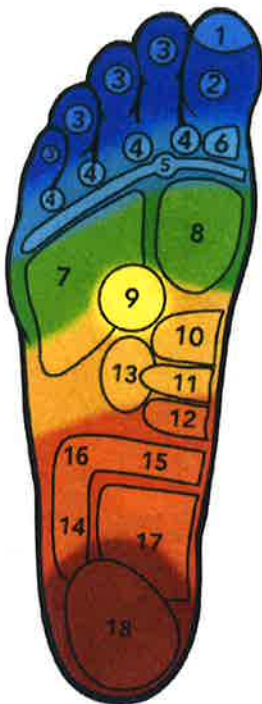

## A stimulation by means of the reflex-zone-bed aims to:

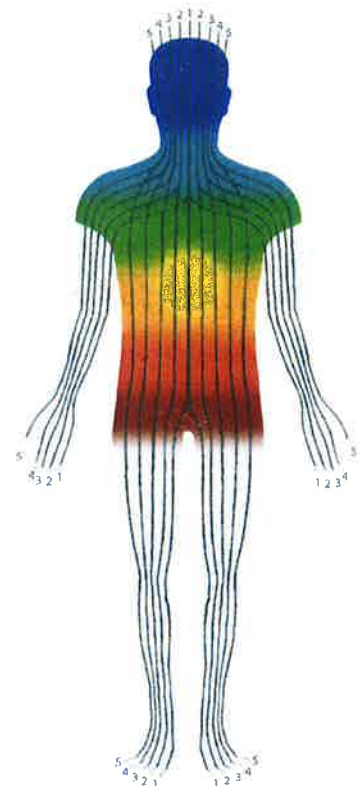

- increase blood circulation in the head
- relax the muscles in the nape of the neck
- improve breathing due to the relaxation of the shoulder girdle
- co-ordinate the autonomic nervous system
- relax the muscles in the upper part of the abdomen
- improve the functions of the digestive system
- improve blood circulation in the pelvic region

## Important areas of zones:

1. Cranial Arch
2. Pituitary Gland
3. Frontal and Paranasal Sinuses
4. Lymph Nodes
5. Shoulder Girdle
6. Neck Region
7. Lungs
8. Thyroid Gland, Parathyroid Gland
9. Solar Plexus
10. Stomach
11. Duodenum
12. Pancreas
13. Kidneys
14. Ascending Colon
15. Transverse Colon
16. Descending Colon
17. Small Intestine
18. Pelvic Region

## REFLEX-ZONE-BED

The reflex-zone-bed is made of soft, natural material and can be worn the whole day without causing overstimulation.

## Fresh Step

Cutting out sanitary insole for everyday use. A perforated combination of PES textile and natural latex foam with addition of chlorophyll is airy and has antibacterial effects and aromatic properties above average. The perforations improve air circulation in the shoe. The required insole size will be obtained by cutting it out along the marked line on the bottom side.

## Hygiene

Anti-smell insole for everyday use. A perforated combination of PES textile and latex foam with an addition of activated carbon is airy and has excellent deodorant properties. The required insole size will be obtained by cutting it out along the marked line on the bottom side. For maximum comfort in every shoe.

## Leather Comfort

Premium quality natural sheep leather on a layer of activated carbon latex foam. The finest components enhance the comfort and durability of your favorite shoes. Leather's natural ability ensures cool comfort all day, prevents tired feet.

## Anatomic

Optimum comfort for the highest demands. The high quality plant tanned sheep leather provides maximum comfort. Active carbon reduces foot odour. The footbed's splayfoot pad, midfoot support and heel padding give pleasant hold, massage effect, good blood circulation and optimum foot-rolling movement in your shoes.

## Massage

A luxurious, orthopaedic insole designed for any kind of shoes. The perforated fine sheep hide is fixed on a pressing pad, supporting instep crosswise and lengthwise. The high quality of a natural material and latex foam containing active carbon with antiperspirant effect on an orthotic shell, ensures the sensation of dryness, comfort and hygiene.

## Anatomic Gold

A luxurious orthopedic insole designed for demanding customers and suitable for all kinds of footwear. A perfect combination of fine sheep leather, latex foam containing activated carbon and two soft gel parts, is fixed on a plastic anatomic shell which together with the pad pressing supports the instep crosswise and lengthwise... The insole degrades distress, foot deformation and provides for a maximum comfort. It has a self adhesive layer to prevent it from move.

## Dinamic

Airy insole intended for sports-shoes. Perforated combination of PES textile and foam containing active carbon prevents from unacceptable smell supported by long lasting aromatic and antimycotic effects provided by latex foam lying on the anatomic shell on the bottom part.

## Active

A durable, anatomically shaped insole mainly for sports and leisure time activities. A combination of 100% cotton and latex foam with excellent aromatic properties has been fixed on a plastic pressing which supports the instep crosswise and lengthwise, prevents the bad smell of feet and gives a feeling of comfort during running or walking. For skin-friendly and pleasant barefoot walking in shoes.

## Air touch

An airy, aromatic insole for every day wear, especially during the summer season. 100 % aromatic cotton with high water absorption ability, pleasant barefoot walk in shoes. The foam containing activated carbon prevents from bad smell supported by long lasting and antimycotic effects provided by the latex foam on the back side.

## Winter

A warm inner sole designated for the winter season. The combination of a 100% wool with aromatized latex foam prevents from an unpleasant smell and guarantees very good thermal properties for the comfort of your feet during cold winter days.

## Thermo

An extra warm inner sole designed for the winter season. Quilted combination of a 100 % cotton and expanded foam has been fixed on a layer of aluminium foil fixed on a plastic pressing. Protective barrier against penetration of cold. It guarantees very good thermal properties and comfort for your feet even during very cold days.

## Snow

An extra warm inner sole designed for the winter season. Quilted combination of a 100 % cotton and expanded foam has been fixed on a layer of aluminium foil fixed on latex. Protective barrier against penetration of cold. It guarantees very good thermal properties and comfort for your feet even during very cold days.

## Wellness

A luxurious, orthopaedic 3/4 insole designed for the demanding people, suitable for any kind of shoes. The perforated fine sheep leather is fixed on a plastic pressing which supports longitudinal and lateral arch together with a carbosan pressing. By walking the insole removes fatigues, feet deformation, provides a maximum comfort, heel padding gives pleasant hold. It is also furnished with a self-adhesive layer against displacement.

## Reflex Comfort

Extra quality 3/4-length anatomical luxury insoles. The stick-on adhesive strip on the bottom of the insole prevents it from moving out of place within the shoe. Its soft massage pad provides all-day comfort and protection. Its upper made of genuine leather and its soft latex layers containing active carbon safely lead away dampness and stop the proliferation of bacteria causing unpleasant smells.

**Heel Grip Pad** It is used for the heel protection and at the same time against the footwear removing. Take off the protective paper and stick it into the heel part, under the upper edge of the shoe. It is made of real hide provided with adhesive layer.

**Heel Lift Pad** Real leather uppers, plant-tanned. The heel cushion's foam rubber wedge supports the heel for soft, comfortable walking. Also suitable as elevation for uncomfortable bootlegs. Non-slip through self-adhesive foil. Suitable for women's and men's shoes.

**Heel Lift Pad soft** Real leather uppers, plant-tanned. The heel cushion's foam rubber wedge supports the heel for soft, comfortable walking. Also suitable as elevation for uncomfortable bootlegs. Non-slip through self-adhesive foil. Suitable for women's and men's shoes.

**Heel Lift Gel Pad** "Invisible" gel heel pad for a soft step. This anti-slip, transparent heel pad cushions the heel, providing extreme shock protection. Highly effective pressure distribution ensures enormous relief for the joints and spine. Self-adhesive, removable.

**Anti Slip Gel Pad** The thin, transparent gel cushions are ideal for pumps and high-heeled sandals. They are soft, non-slip, provide hold and prevent foot-ache caused by long standing or walking periods in high heels. Reusable.

## SportMAX

Anatomically shaped sport insoles fitted with gel cushion at the heel. It diverts sweat developing during exercises into the inner layers of the insole by its extremely hygroscopic coating. The soft gel cushion placed at the heel soothes collisions affecting the heel of the foot during running or active use.

## Bacteria STOP

The insole of special quality diverts humidity into an activated carbon layer through its special upper, highly absorbent coating. Thereby it provides protection against the proliferation of bacteria liable for the development of the unpleasant feet odour. The „memory foam” layer at the bottom of the insole follows the anatomic characteristics of the foot and the design of the shoe perfectly ensures thereby a whole day-long comfort and stable posture.

## Aloe Active

It takes natural care of the soles. The soft upper micro-flex layer of the insole impregnated with aloe vera extract tends and hydrates the foot at every step. The vibration damping feature of the soft latex layer put inside the insole ensures all-day comfort.

## Anatomic Gel Comfort

The coir cushion under natural leather uppers absorbs the moist produced in the closed shoe by the perspiring leg. The gel cushion of honeycomb structure placed at the heel maximally soothes collisions affecting the heel of the foot caused by gait. Its anatomic design ensures healthy posture during everyday use.
